About Me

27 years old frontend developer with expertise in HTML, CSS, JavaScript, and popular frameworks such as React. Passionate about user-friendly web applications with a focus on performance optimization and accessibility. Strong problem-solving abilities and collaborative mindset for delivering high-quality code.

Experience

Booking app project:

I built a full-stack web application utilizing the latest technologies. On the frontend, I used React with Next.js for server-side rendering and TypeScript for type checking. I used Redux for state management, Axios for handling HTTP requests, and Redux Toolkit and RTK Query for additional Redux utilities.
To handle form validation, I used React Hook Form and Zod for schema validation. For styling, I leveraged the power of Sass and TailwindCSS. On the backend, I used Next.js API routes to build the API endpoints and MongoDB for the database. To deploy my application, I containerized it with Docker, allowing for easy and consistent deployment across different environments. I used Jest and Testing Library React for unit and integration testing. You can view my project source code and a demo deployed on vercel on my github page in the link bellow.
